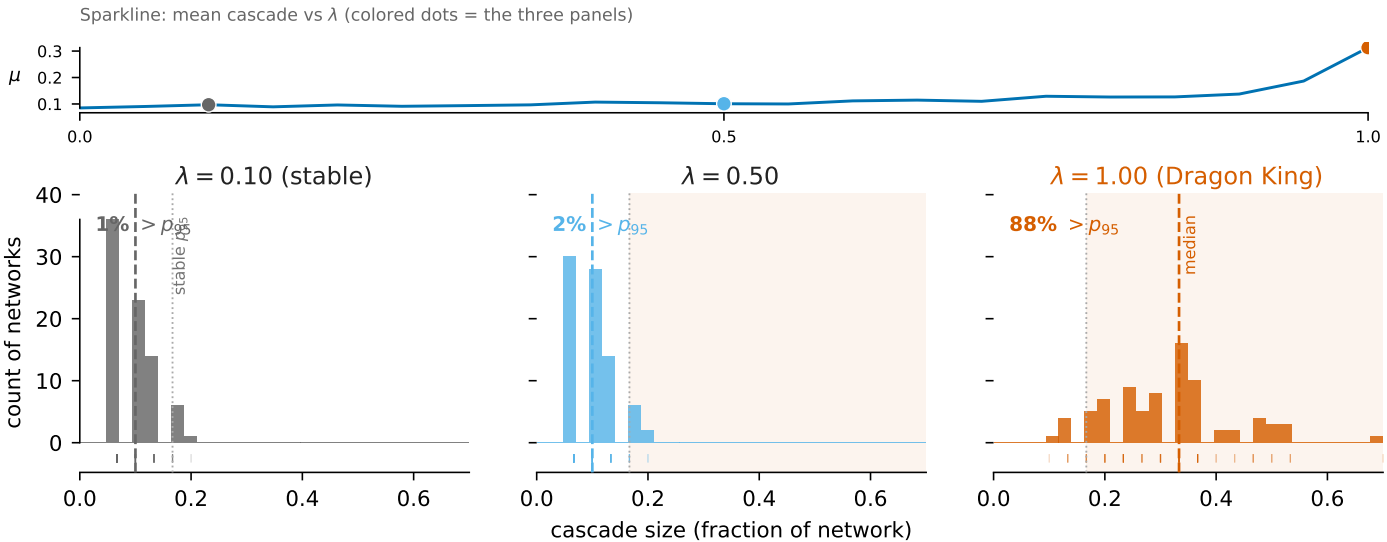
Above the cliff, large cascades become common — not rare tail events



Summary (shared *x*-scale):

λ	regime	median	mean	% $> p_{95}^{\text{stable}}$	max
0.10	stable	0.10	0.10	1%	0.20
0.50	mid	0.10	0.10	2%	0.20
1.00	**Dragon King**	**0.33**	**0.31**	**88%**	**0.70**

Reading guide: sparkline = average cascade along λ (dots = panels). Histograms share one *x*-scale. Dotted line + pink band: beyond stable-regime $p_{95} = 0.17$. Dashed: median. Rug: one tick per run. Table: exact summaries. 80 networks per panel.
